DETAILED ACTION

1. This Office Action is the answer to the Amendment filed on May 1, 2009, which paper has been placed of record in the file.
2. Claims **1-26** are pending in this application.

Allowable Subject Matter/Reasons for Allowance

3. Claims **1, 10, 11, 17, and 19** are allowed over the prior arts cited records.

The closest prior arts are:

1) Kalmus (US 4,674,044) discloses securities trading in any market where the market maker acts as a principal, i.e., fills customer buy orders by selling the security from the market maker's inventory position (long or short), buying to increase a long position or reduce a short position for customer sell orders. The system retrieves the best obtaining bid and asked prices from a remote data base covering the ensemble of institutions or others making a market for the relevant securities. Data characterizing each security buy/sell order requested by a customer is supplied to the system. The order is qualified for execution by comparing its specific content fields with predetermined stored parameters. The stored parameters include such as the operative bid and asked current market prices, the amount of stock available for customer purchase or sale as appropriate, and the maximum acceptable single order size. Kalmus does not disclose posting a separate quote or an agency quote to reflect to the market customer interest separate from proprietary interest in the security.

2) Gary (US 6,618,707) discloses an exchange that automatically moves the price of a market maker's quotation one or more trading increments worse than the

quotation price after the size of the quotation has been exhausted, such new quotation having a predetermined size that is dependent upon the price of the new quotation. Gary teaches an exchange that automatically guarantees a predetermined minimum number of contracts at the market price by placing a derived order for a primary market maker at the market price so that the total size at that price will be at least the predetermined minimum number of contracts. Gary does not teach a separate quote or an agency quote to reflect to the market customer interest separate from proprietary interest in the security.

3) Martyn (US 6,195,647) discloses a method of customizing the displays according to this invention that operates in a data processing system providing a user an interface with a securities exchange system over which securities are traded. A system display database contains information to be shown in system displays that show information about the securities exchange system. The method comprises the steps, implemented by the data processing system, of: receiving from a user a first input requesting a maintenance display indicating which system display shows information about a desired security; displaying, in response to the first input, the maintenance display; receiving a second input from the user indicating a change in the system display that shows the information about the desired security; and updating the system display database to reflect the changes indicated by the second input. Martyn also fails to teach a separate quote or an agency quote to reflect to the market customer interest separate from proprietary interest in the security.

Therefore, it is clear from the description of Kalmus's, Gary's and Martyn's inventions above, that the prior arts do not considered the possibility of: A method and

system for quoting securities, comprising: receiving by the computer system for display in the market, using a separate quote reflecting at least one of a bid and/or offer price for the security to reflect a customer order or interest, as included in claim 1; by the computer system, for display on the display device a bid and/or offer, as a separate quote, reflecting an order for a customer, using the unique market maker identifier and an additional symbol that indicates the separate quote is an agency quote for a customer of the market maker, as included in claim 10; post a separate bid and/or offer quote of the customer for the security to reflect to the market customer interest separate from proprietary interest in the security, as included in claim 11; enter an agency quote for a bid and/or offer for an agency account into a quote system; and send the agency quote identified with a unique market maker agency identifier to a server that disseminates for display to the market that agency quote with other quotes for the same security from other market make, as included in claim 17; post, for display to the market a separate bid and/or offer quote of the customer for the security, as included in claim 19.

4. Claims (2-9, 21), (22-26), (12-16), (18), and (20) are allowed because they are dependent claims of the allowable independent claims 1, 10, 11, 17, and 19 above, in that order.

Conclusion

5. Claims **1-26** are allowed.
